EventEase

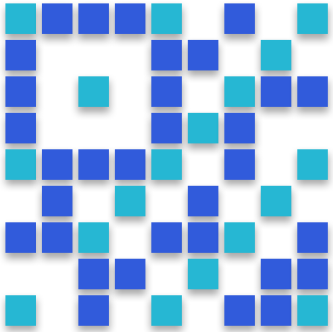

College Event Registration & QR Check-In

TEAM	TEAM ID	TEAM LEADER
CodeSpark	895F	Anant Nanda

PS-03 · EVENT MANAGEMENT / DIGITAL SOLUTIONS

A unified platform for registration, QR entry and live attendance.

EVENT PASS

READY FOR CHECK-IN

REGISTRATION ID

Unique QR Pass

REGISTER • SCAN • ATTEND

Why event entry needs a better system

CURRENT REALITY

Manual processes create avoidable friction.

- Paper lists, forms and spreadsheets
- Long queues at event entry
- Incorrect attendance counts
- Duplicate or fake entries
- No unified view of capacity and attendance

WHO IS AFFECTED

01	02	03
Students	**Organisers**	**Administrators**
Clearer, faster entry	Less manual work	Reliable attendance data

Root cause: registration and on-site check-in run in separate, unlinked tools.

One platform. Three connected roles.

EventEase connects online registration, QR validation and live attendance.

STUDENT

Registers online

Receives a unique ID,
entry code and QR pass

EVENTEASE

Validates securely

Checks registration,
capacity and check-in status

ORGANISER

Scans at entry

Records attendance once;
views live dashboard

BUILT-IN SAFEGUARDS • **Seat limits** • **Unique check-in record** • **Duplicate scans rejected**

Four core capabilities

01

Event creation & capacity

Set event date, venue, capacity and registration window.

02

Registration + QR pass

Validate submissions and issue a unique ID, entry code and downloadable pass.

03

QR / manual check-in

Scan a QR code or enter the code for server-side verification.

04

Duplicate block + dashboard

Reject repeat check-ins and track registrations, attendance and percentage.

From registration to verified entry

01

REGISTER

Participant submits form

02

VALIDATE

Check fields and capacity

03

ISSUE PASS

Save record and create QR

04

CHECK IN

Scan code; record once

SECOND SCAN

Rejected as a duplicate → attendance dashboard updates

Capacity is checked before registration is accepted; a check-in can be recorded only once.

Technology stack

LAYER	TECHNOLOGY	PURPOSE IN EVENTEASE
Frontend	HTML5 · CSS3 · JavaScript Bootstrap 5 · Chart.js	Responsive interface and attendance charts
Backend	PHP 8 · PDO · Sessions CSRF tokens	Server logic and session-aware security
Database	MySQL Foreign keys · UNIQUE keys	Related records and duplicate check-in prevention
QR / Scanner	qrcode.js html5-qrcode	Generate passes and scan with a phone camera
Hosting	XAMPP (Apache) PHP-compatible hosting	Local demo or deployment on a PHP host
Tools	Git · GitHub · VS Code phpMyAdmin	Version control, coding and database management

Current progress & next work

COMPLETED

- Problem analysis, workflow and database design
- Admin login and event management
- Registration ID, entry code and QR pass
- QR / manual check-in with duplicate rejection
- Dashboard, participant search and CSV report

IN PROGRESS

- End-to-end testing and bug fixing
- Event editing and image upload
- Waitlist and email confirmation
- Public GitHub repository and demo link

DEMO: CREATE → REGISTER → SCAN → VERIFY

Roadmap: from hackathon to pilot

PHASE 1

DURING THE HACKATHON

- Finish end-to-end testing
- Polish UI and demo data
- Demonstrate duplicate rejection

PHASE 2

RIGHT AFTER

- Event editing and image upload
- Waitlist, confirmations and reminders
- Attendance certificates

PHASE 3

LONG-TERM VISION

- Support multiple colleges and organisers
- Pilot at a real college event
- Explore a hosted institutional service

Priority: prove the end-to-end registration and check-in flow before expanding scope.

08 · THE VAULT

Project repository

GitHub link supplied in the source template:

github.com/<your-username>/eventease

PUBLIC	Repository visibility is intended to be public.
README	Setup, features and team details.
COMMITS	Regular contributions from team members.

Before presenting: replace the GitHub username placeholder with the actual repository URL.
